Hi Paul & David,

It looks like there are a couple of things going on. By default, the MAP() function is assigning the center_longitude of the projection to the center of the map, instead of 0 degrees. I'm not sure if this is correct or not, but regardless, the map_proj_forward is then having trouble clipping the polygon.

I'll look into both issues, but in the meantime, if you specify CENTER_LONGITUDE=0 in your map() call, it should give you a nice looking map.

Cheers,
Chris
