> Well, as you say, you haven't been working with IDL long. ;-)

I dont mean to insult anyone but its already to long :-) I'm a programmer not a scientist and the things I've seen scare me. Not just the language itself but the code produced by people who havent been tought the basic principals of software design. Its sad to think of how much cpu processing time is wasted by such programs. Anyway its been an interesting insight to say the least.
