If you cannot find the convert command of ImageMagick, go to the Terminal and type in

```
$ which convert
```

which should output where the file is located. For me, I get

```
> /usr/local/bin/convert
```

So, I add this to my startup:

```
SetEnv, 'PATH=/usr/local/bin:' + GetEnv('PATH')
```

(I don't recall why exactly I don't use \$PATH, but GetEnv instead.)

With this, I get

```
IDL> print, cgHasImageMagick()
```

```
1
```

Cheers,
Phillip
