Folks,

It has just been brought to my attention that all my links to JD Smith's wonderful IDLWAVE EMACS mode (idlwave.org) are now pointing to IDLWAVE Investing. I can believe JD found a better gig, but what about the rest of us who depend on him?

Even the [jdsmith/idlwawve](#) GitHub repository doesn't look like it has been touched for a couple of years and has the same investment link on it that my page has.

Does anyone have any idea what is up here? People are concerned and want to know!

Cheers,

David
