
Subject: Overplot contour on previously stablished coordinates

Hi all!

I have an image created using cgPlot in combination with cgImage. This image has its own coordinate system, which is given in distance from the central point.

Now I would like to superpose a contour image on the previous one, using the same coordinate system. The problem is that the contour image is rotated and has a different size.

Any help would be very appreciated.

Thanks.
m.
