where they demonstrate making IDL plots with latex math expressions. I have not tried this myself
so I don't know if you could produce Cyrillic text with it but then again maybe you can.

Guys, I'm happy to share with you good news -- the problem is solved! The latexify advice works. I modified slightly the latexify (again had problems with cyrillic in LaTeX :D) and now I can eventually print Russian text. Mats, you saved me from writing boring translator code and more importantly I can use device font which I usually prefer. I love this group!

-Katya.
