Hi Dick,

Thank you very much for your valuable help!

Indeed, now I'm able to create what I wanted using Option 1 as you can see in this link:

https://dl.dropbox.com/u/6573328/hom_model2

However, I would need to be able to set the viewing parameters such as inclination angle and scale (like in the 2D figure I showed before). Do you think this is possible within Option 1?

Again, thank you for you help!

Cheers,
m.
