Subject: Insert variable values into legend
Posted by dgwenzi on Fri, 05 Apr 2013 17:19:09 GMT

Hi All

I want to insert a variable value into my legend for example my program would have calculated a value for a variable called "mean"

```
p=plot(findgen(10))
l=legend,['mean =']
```

I want the value of mean to be pasted in front of the text in this legend. Thanks in advance.

David
