The SMOOTH function does not seem to be smoothing anything for me. Am I missing something?

```
IDL> print, smooth(findgen(10), 3)
```

```
    0.00000    1.00000    2.00000    3.00000    4.00000    5.00000    6.00000    7.00000
    8.00000    9.00000
```

```
IDL> print, !version
```

```
{ x86_64 darwin unix Mac OS X 8.0 Jun 17 2010    64    64}
```
