
Subject: Problem with psym=3 option on sparcprinters

We have recently aquired a sparcprinter running off of a Sparcstation 2 for IDL output, running Newsprint. When trying to do a plot using the psym=3 (dots or periods) option, no dots appear on the sparcprinter. The same postscript file sent to any other normal postscript printer produces dots just fine. Has anyone else run into this problem? Otherwise the sparcprinter does everything else (greyscale, line plots, etc.) just fine.
