Subject: high quality videos with idlffvideowrite? Posted by George millward on Wed, 24 Apr 2013 21:07:42 GMT View Forum Message <> Reply to Message

Hi there,

Can anyone point me to some documentation on how to make a high quality video with idlffvideowrite - I'm sure Exelis put one together - but, as is often the case, I can't find it.

I can easily create videos with iflffvideowrite - but they are usually very horrible and compressed. I have replaced all of the ffmpeg .dll files as described in the reference manual and so I have lots of codecs and formats to work with... (I'm on windows7 btw)

...but I never seem to get anything other than a really poor quality movie. Surely this can't be that hard ?!?

Cheers

George.
