Just an update:

Since I needed to include a bar scale in the output plots, I included the following line in my code:

```
oplotscale, -0.5, 1, 0.5, '1175 A.U.', $  
    color=cgcolor('white'), $  
    charsize=0.6, $  
    thick=5, /above
```

This is an external procedure that I just downloaded from here:

<http://www.cita.utoronto.ca/~tchang/gbt/procs/gen/image/oplotscale.pro>

Don't ask me why, but now I can get the Angstrom symbol to be displayed correctly in the output (same PS/PDF viewer).

Best regards!

m.
