Subject: Subscripts with greek symbols
Posted by Harish Khandrika on Sat, 20 Apr 2013 23:52:25 GMT

Hello everyone,

    I am trying to create a plot with axis titles that have greek letters and greek subscripts, however I'm having a hard time trying to get it to do what I would like it to do. In tex-speak, I want it to display something to the effect of "\Omega_\Lambda". Presently if I do something like

cgplot, findgen(10), findgen(10), xtitle='$\Omega$$\sub\Lambda$', this literally writes the word '\Lambda' in subscript terms.

What is the correct procedure for producing "\Omega_\Lambda" or any other greek letter for a subscript/superscript?

Any help would be greatly appreciated.

Many thanks,
Harish
