Hi Tom,

I slightly tweaked your code by adding a "cg.Close" right after the Refresh, so that it closed the window before doing the next antenna. I computed all of the antenna times between 6 and 14, and got the following results:

n	time/n^2
6	0.0458333
7	0.0473469
8	0.0465000
9	0.0475802
10	0.0498900
11	0.0508099
12	0.0507153
13	0.0508225
14	0.0529898

So, with IDL 8.2.3, the times are no longer quadratic, which is good, but they are still showing a slight linear trend.

I'll keep looking at the issue, and let you know what I find. Thanks for all of the code. That really helps!
