Subject: strictarrsubs in IDL 8.1

Hi,

I have the following in my .idlstartup:

```
compile_opt strictarrsubs
```

However, I can subscript arrays in 8.1 with [-1], for instance. If I remember correctly, the `compile_opt` statement in earlier versions of IDL meant I would get an error for a [-1] subscript. Am I misremembering, or has something changed?

Thanks,

Kyle
