Greetings Everyone,

Just wondering if everyone knows of IDL routines that can read,
manipulate and process Vector Product Format (VPF) files as defined in:

  MIL-STD-600006: US DoD Military Specification: Interface Standard for
  the Vector Product Format (VPF), or earlier.

This format is used, among other things, in the Digital Chart of the
World CD-ROMs.

Please email and I'll post a summary before I start writing code from
scratch.

 - Ben
