Hi,

I am using IDL 7.0, and I am having a hard time with the color tables.

To change the table I have been typing:

```
DECOMPOSE=0
```

```
LOADCT= 39
```

This color table should include a lot of colors, but no matter what reference number I use, I get a shade of red. I have also tried other tables, and still I get red.

I am a new IDL user and this may be a really basic problem.

If you have any insight, please let me know.

-Meg
