Subject: Pass variables into Newton or BROYDEN for solving non-linear equations
Posted by Zhang Bo on Mon, 17 Oct 2011 19:09:14 GMT

I have a non-linear equation system to solve every loop step. In each
loop step I have to pass 4 variables, which are different in each
loop, into the non-linear system. I have been working on this for an
hour and it seems BROYDEN does not allow to pass variables in the
equations, and it's also not possible to add another 4 equations in
the system. I kind of stuck here.
