Subject: IDL8 plot
Posted by laoli on Mon, 20 May 2013 05:32:27 GMT

Dear all,

Just started to use idl8.0.1 and got problems Re plot.

The code is very simple:

```
Pro tst
  w = WINDOW(WINDOW_TITLE="My Window", DIMENSIONS=[500,100])
  t = TEXT(50, 220, "$\it Draw arrow here$", /DEVICE)
  arrow, 50, 100,200, 100
End
```

Two problems:
1) why the graphic window is not 500 x 100? It seems the window dimension has to be greater than 475 x 323? I am using windows machine with resolution of 1280 x 1024.
2) the arrow appeared on a new window, not the current one.

Any suggestion will be greatly appreciated.
