OK, found a fix to this codec mess. Just follow the instruction of "Replacing the FFmpeg Version" in the document. The instruction is a bit outdated in terms of version numbers. You need to download ffmpeg-1.2-win64-shared.7z from <http://ffmpeg.zeranoe.com>. Back up the original dlls (avcodec-54.dll avformat-54.dll avutil-52.dll swscale-2.dll), replace them with the ones from the downloaded ffmpeg-1.2. Boom, we are good now. And enjoy the bubbleplot!

Cheers,
bp

> Just installed. Bubbleplot is fun to play with. But I don't really need it for now. The sad part is that lots of my video output code is broken. Especially those google ".webm" format. I suppose you should not expect these silent changes in the what's new section. I guess I will have to roll back to 8.2.2 for some time.
