Subject: points on a plot
Posted by fd_luni on Fri, 07 Jun 2013 09:49:26 GMT

Hi all

I had compute the singular values using the SVDC command and I want to present on my graph each eigenvalue with a dot or any other symbol.

I tried something like this
IDL> xx = [1,2,3]
IDL> yy = [1,3,4]
IDL> plots, xx, yy, psym = 4

but I want to keep the line and add symbols in each singular value. Does anyone know?

With Thanks
Maria
