Hi David,

Thanks for the quick reply. Maybe i've misunderstood what clip was doing! I have two density fields each with different min and max.

If the first field has (rho1\_min, rho1\_max) and uses a colour table range [0,255] then for the second field i was finding the colour range that corresponded to (rho2\_min, rho2\_max) where e.g. if rho1\_min = 0, then the colour table range for the second field is [255\*rho2\_min/rho1\_max, 255\*rho2\_max/rho1\_max],

Assuming that rho1\_min < rho2\_min < rho2\_max < rho1\_max.

Does this make sense?

Are there any examples of c\_colors that i can look at to get started?
