G'Day

Is there any commercial or PD software for interfacing Matlab/IDL/AVS ?
I mean so that one can pass data structures as well as call the routines
from each package (eg call an AVS routine from Matlab or a Matlab routine
from IDL). I am sure we are not the only site which has all three packages,
given each has its strengths and weaknesses. Suppose I attempted to write
such a beast. Would this breach any copyright or other regulations ?

best regard
