Hello,

I have some data which I simply want to fit p[0]*x^P[1] on them, But
I don't know I am receiving very far results!
I am using mpfitfun like this:

start=[0.001, 0.1]
results=MPFITFUN('MYFUNCTION', x, y, err, start)

I applied this function and points in MATLAB (fitting toolbox) , and I had reasonable coefficients .

I'd really appreciate your help since I really want to use MPFIT for my more complicated function.

regards,
nafis
