Subject: Problems with Legend procedure?
Posted by mfaust on Fri, 28 Jun 1991 20:44:12 GMT

Hi IDL/WAVE users,

I'm currently experencing a problem using PV-WAVE. I want
        to produce a postscript plot with a legend. I set up a
        procedure to do the plots and tested it in the X window.
The plots come out fine with legends in the specified places.
        When I set_plot,'ps' (plus device/landscape) and use the
        same procedure the plot comes out exactly the same but
        without legends. Am I overlooking something about with
        the legend command?? Any other advice or help that may be
        usefull the semi-neophite?

Thanks in advance,

Mitchell Faust
