
Subject: Update stdout instead of writing new line

Hey

I had hoped that someone here might be able to answer this quick question:

I like to monitor my progress by writing stuff into the terminal, but it would be much more convenient to update the output instead of writing a new line.

e.g.:

```
FOR i=1,100 DO PRINT, i
```

writes 100 lines in the terminal. Would it be possible to overwrite the previous output so that in the end only one line is used?

Thanks for any hints :)
