Hi David,

Unfortunately, as I posted before, I don't have control over which software versions are installed on the machine I am using today. Would love to go back and use the machines I normally do, but can't right now.

And I agree that it is probably not an IDL issue--but as the IDL 8 brochure I linked advertises pdf output, I thought I should see if there were a way to create my pdf directly from IDL rather than eps->pdf, which may not suffer from this problem.

Thanks,

Andy
