Subject: coyote graphics /iso command
Posted by Petros Syntelis on Thu, 27 Jun 2013 12:27:53 GMT

Hi,

I am using the cg graphics, and i save an image using a code like:

```
ps_start, fi=", /encaps
cgcontour, ... ,/iso
ps_end
```

The resulting file, due to the /iso command has a large blank space on the right, which makes it difficult to tile multiple images in latex
How can i fix this to have an image with the scaling of the /iso plot?

Thanks,
Petros
