Haje Korth writes:

> I have an issue on IDL for Windows, where the command history does not store any recent commands. Checking into the problem I noticed that I have a number of stale idl_engine.exe processes running. These should have been shut down automatically when the workbench these processes were attached to were closed. This is on v8.2.3, but I have had this problem with other versions as well. Are the two phenomena related? Is anyone else having these issues?

I haven't seen anything like this. Sorry. Windows 7 64-bit and IDL 8.2.3.

Cheers,

David
