I found this routine online, although I'll note that the path to the file contains the word "obsolete" so perhaps there is a newer/better way: http://idlastro.gsfc.nasa.gov/ftp/obsolete/spline_smooth.pro

Hope this helps,

Andy

But I want to use the same function, but since I have not used matlab and I am familiar with idl. Can anyone one of you who can tell me which routine in idl can be used as a substitute for spaps in matlab.
