Is there a maximum number of keywords allowed in IDL?

I have been using cgGraphicsKeywords__Define to create a few graphics objects. When I pass the entire list of accepted keywords into, e.g., cgContour, I get weird errors like

% Expression must be a structure in this context: YRAN

The (45th) keyword YRANGE gets cut off. If I comment out YRANGE and all keywords that follow, it works. If I comment out keywords that occur before YRANGE in the parameter list, the error occurs in a different place.
