This is new to me. I'm just working with a class written by someone else...

Reading further (http://www.exelisvis.com/docs/IDL_Object.html), I realized I also had to add the line "INHERITS IDL_Object" to the class structure.

Hmmm... And I don't have a "PRO myObjectClass__define", I just have

struct = {red, ..., INHERITS IDL_Object}
tmp = obj_new('red')

in a function definition. This is in IDL 7.1.1.

I'm a bit out of my depth here...
