Hi,

As an Emacs user, I'm very glad to have found idlwave mode for editing and interacting with the IDL shell (Emacs 24.3, idlwave 6.1), as I learn IDL. However, the docs and my searches keep leading me to [www.idlwave.org](http://www.idlwave.org), which has absolutely nothing to with this mode. I'm using IDL 7.1, and it seems as if the help system is no longer accessible from this idlwave version. Has development of this mode stopped, or any tips on how to work around this?

Thanks,

--

Seb
