Subject: combination of two integration methods in a specified time interval
Posted by fd_luni on Sat, 28 Sep 2013 11:50:17 GMT

Hi

I was wondering how can I use two different integration methods. I.e for the time interval [0,300] do trapezoidal rule and from the rest time points do log-trapezoidal rule. My question is how can I specified the time interval in order to combine these two methods?

Many Thanks
Mar
