Hi Paul,

You can access plot properties by NAME. For example, given:

```
w = window()
for i=0, 5 do begin

    !null = plot(/test, color=!color.(i), layout=[3,2,i+1], $
                current=w, name=string(i, format='(i2.2)'))
endfor
```

you can set the color of the fifth plot to red with:

```
w['04'].color = 'red'
```
