
Subject: Plotting points in fainter color on an IDL plot

Hello, I have a scatter plot in which there are some points which represent more reliable determinations than others. I want to plot both kinds of points in the same color but the less reliable ones in paler colors. In a sense, I want to change the brightness of few points on the plot. Is it possible in IDL? I am using color table 13 and plot and oplot procedure of IDL.

Thanks for the help,
Kaushal
