The netCDF4 file you sent me can be browsed with the H5_Browser supplied with IDL. If the good folks at ExelisVis would give me the code for that browser, I'd fix it so that it worked more intuitively. ;-)

So, I guess the question is, do we need a better HDF5/netCDF4 browser or do we just need a better way to get at the data in these files? I haven't yet looked at Mike Galloy's routines, but these are generally extremely reliable for these kinds of things.

Cheers,

David
