Subject: SPAWN

Posted by Nobuyuki Tasaka on Tue, 08 Apr 1997 07:00:00 GMT

Hi all,

If someone who have tried to compare SPAWN in the following
usage, please let me know the difference in terms of data
parsing speed, interface flexibility and routine's independency.

I would like to use SPAWN for calling database retriving routine
written in C.

1) SPAWN, "cmd", result

2) SPAWN, "cmd", /UNIT

3) SPAWN, "cmd"
  (C routine writes data to memory map file and then IDL read it
   as a Logical Unit File)

I'm looking forward to your help.
Nobu
