Hi Andre,

Do you mean "help, /recall"? Or is this some Wave thing?

In IDL, I would run a journal thus:

```
journal, file="savecmds.txt"
```

stopping the journal with a straight "journal" command.

You can then read the file in the normal text reading way (READF).

You may want to check if a journal is already running by checking the !journal system var. Check out the Help page for journal for more tricks.

Cheers,

Dave.
