Hi everyone,

I have a string array representing date/time, for example, ['2008-07-25T20:56', '2008-07-25T21:32']. Any idea to 'replicate' it into a 2x100 array in a way similar to that described in the 'Dimensional Juggling Tutorial' (http://www.idlcoyote.com/tips/rebin_magic.html)?

Thanks.

Clark
