Dear JP,

I am aware that you requested Ternary plots in IDL, however, I wanted to mention that I have just published on CRAN, a package for R, for the plotting of ternary diagrams.

It is based off ggplot2, which is highly regarded, and, my website can be viewed at [www.ggtern.com](http://www.ggtern.com), including many examples, specifically including a case study at the following address:

<http://ggtern.com/case-studies/>
