Can somebody tell me how to get multiple images with postscript on one page with wave?

According to T12 of the idl-faq I tried the following:

```
; WAVE Version 3.10 (hp-ux hp9000s300)
ximsize=0.333*!D.x_size
yimsize=0.5*!D.y_size
set_plot,'ps'
device,/color,bits=8
tvsc1, rebin(float(ry),160,208),0, xsize=ximsize, ysize=yimsize
tvsc1, ..... for the positions 1 to
```

on screen I get 6 images, but previewing the postscriptfile with ghostscript gives 6 images one over the other in the same position.
Is there something wrong with the code or is it just not possible to do it?
Thanx for any help
Rolf.
