Interesting (maybe, I think). Here is the output:

```
IDL> spawn, 'convert /Users/blesht/test1.ps /Users/blesht/test1.jpg'  
convert: bad parameters to zlib `/var/tmp/magick-38329JSFNnPDnhRZr1' @  
error/png.c/MagickPNGErrorHandler/1804.  
convert: corrupt image `/var/tmp/magick-38329JSFNnPDnhRZr1' @  
error/png.c/ReadPNGImage/4051.  
convert: Postscript delegate failed `/Users/blesht/test1.ps': No such file or directory @  
error/ps.c/ReadPSImage/837.  
convert: no images defined `/Users/blesht/test1.jpg' @  
error/convert.c/ConvertImageCommand/3144.
```

I don't know why ImageMagick still seems to be invoking the 'PNG' routines. The same command works fine from the shell. By the way, I tried to compare the environmental variables (using the `printenv`) command from inside and outside of IDL. They are essentially the same (though IDL adds its directory to the path).
