I found the thread. Thanks for letting me know!

The link I showed interested me because hints at a system variable within ImageMagick pointing to "convert". However, your thread shows the problem is particularly with convert, not necessarily with ImageMagick.

IDL has been including GZIP and ZLIB functions in its 8.x releases. Would that mean they also include a (different) version of zlib within the IDL distribution?

Ok, I will stop speculating and watch the IDL forum :)

(if anyone else is interested... <http://www.exelisvis.com/Support/Forums/tabid/184/forumid/7/threadid/15101/scope/posts/Default.aspx>)
