Here is one way to do it. Create the function below, then

```
IDL> array = findgen(20)
IDL> print, SubArray(array, 1, 3)
IDL> print, SubArray(array, 1, N_Elements(array)-1)
IDL> print, SubArray(array, 1, -1)
```

```
function SubArray, array, index1, index2
    return, array[index1:index2]
end
```
