> This plot works well but varying the limits of Axis_range in plot2 does not scale the plot2.

Plots do not have an "Axis_Range" keyword. Instead, they use "[XYZ]Range". In the above example, if you can do, for example,

```
Plot2.YRange = [100,1000]
```

If instead you are using Axis2, then

```
Axis2.Axis_Range = [100,1000]
```

will scale the axis (the axis shortens to be in the proper range), but leaves the actual data space alone. The plot itself does not zoom to the range [100,1000].
