
Subject: plot filled circles

Hi,

I know it's a silly question, but I was not able to make it work. I'm plotting circles with a defined radius as per my data. Since there are many files to plot, I'm using oplot to do this. But when I'm trying to do filled circles with one of the oplots with /fill, it shows /fill will not work with oplot. Is there a workaround to get this done?

Thanks,
Krishnakumar
