Hi,
Now that I have made the mistake of using the function graphics over Dave's cgplot functions can you please help me with the following error that I am getting in function graphics.

When I give a=PLOT(x,y, NAME="2008/2009")
I get the error.
PLOT: The identifier property value cannot contain '/' characters.

I have to use NAME keyword because I later on use the LEGEND function graphic which uses NAME to identify the plot.
Any help in either getting the PLOT to accept the "/" or to get the LEGEND to show "2008/2009" against the target plot.
