Subject: How can I change from qwerty keyboard to azerty ?
Posted by Sylvain Philippe on Wed, 29 Jan 2014 08:06:38 GMT

Hello everybody !

I have a tricky problem here : my keyboard is azerty working on windows (i recently changed it from an old qwerty). The problem is, when i go to my job's server to work and open IDL in linux (my linux terminal is in azerty too) I have a problem writing in IDL because this one consider I have a qwerty keyboard. I guess it's not really related with IDL himself because if I use another computer I will have my azerty just fine.

Does someone who already experienced this have an idea ? Thanks a lot, have a nice day

Sylvain
