Subject: find out name of file from "lun" unit number
Posted by ankorrigan on Sat, 01 Feb 2014 02:27:24 GMT

Hi,
I need to extract a parameter from a filename in an idl procedure.
But only the lun is passed as a parameter to this procedure.
Is it possible to find out the name of a file using his lun?
let's say:
openr, lun, 'filename', /get_lun
file_name= find_file_name(lun)
how to write this "find_file_name" function?

Thanks a lot in advance!
Antoine
